

SeQent and CIMPLICITY Integration

SeQent's [CIMPLICITY](#) Gateways monitor the alarm queues of a CIMPLICITY project for alarms which match defined conditions. In addition, by using the SeQent OPC Gateways, CIMPLICITY data such as points and virtual points may also be monitored. Depending on the gateway selected, the actions may include:

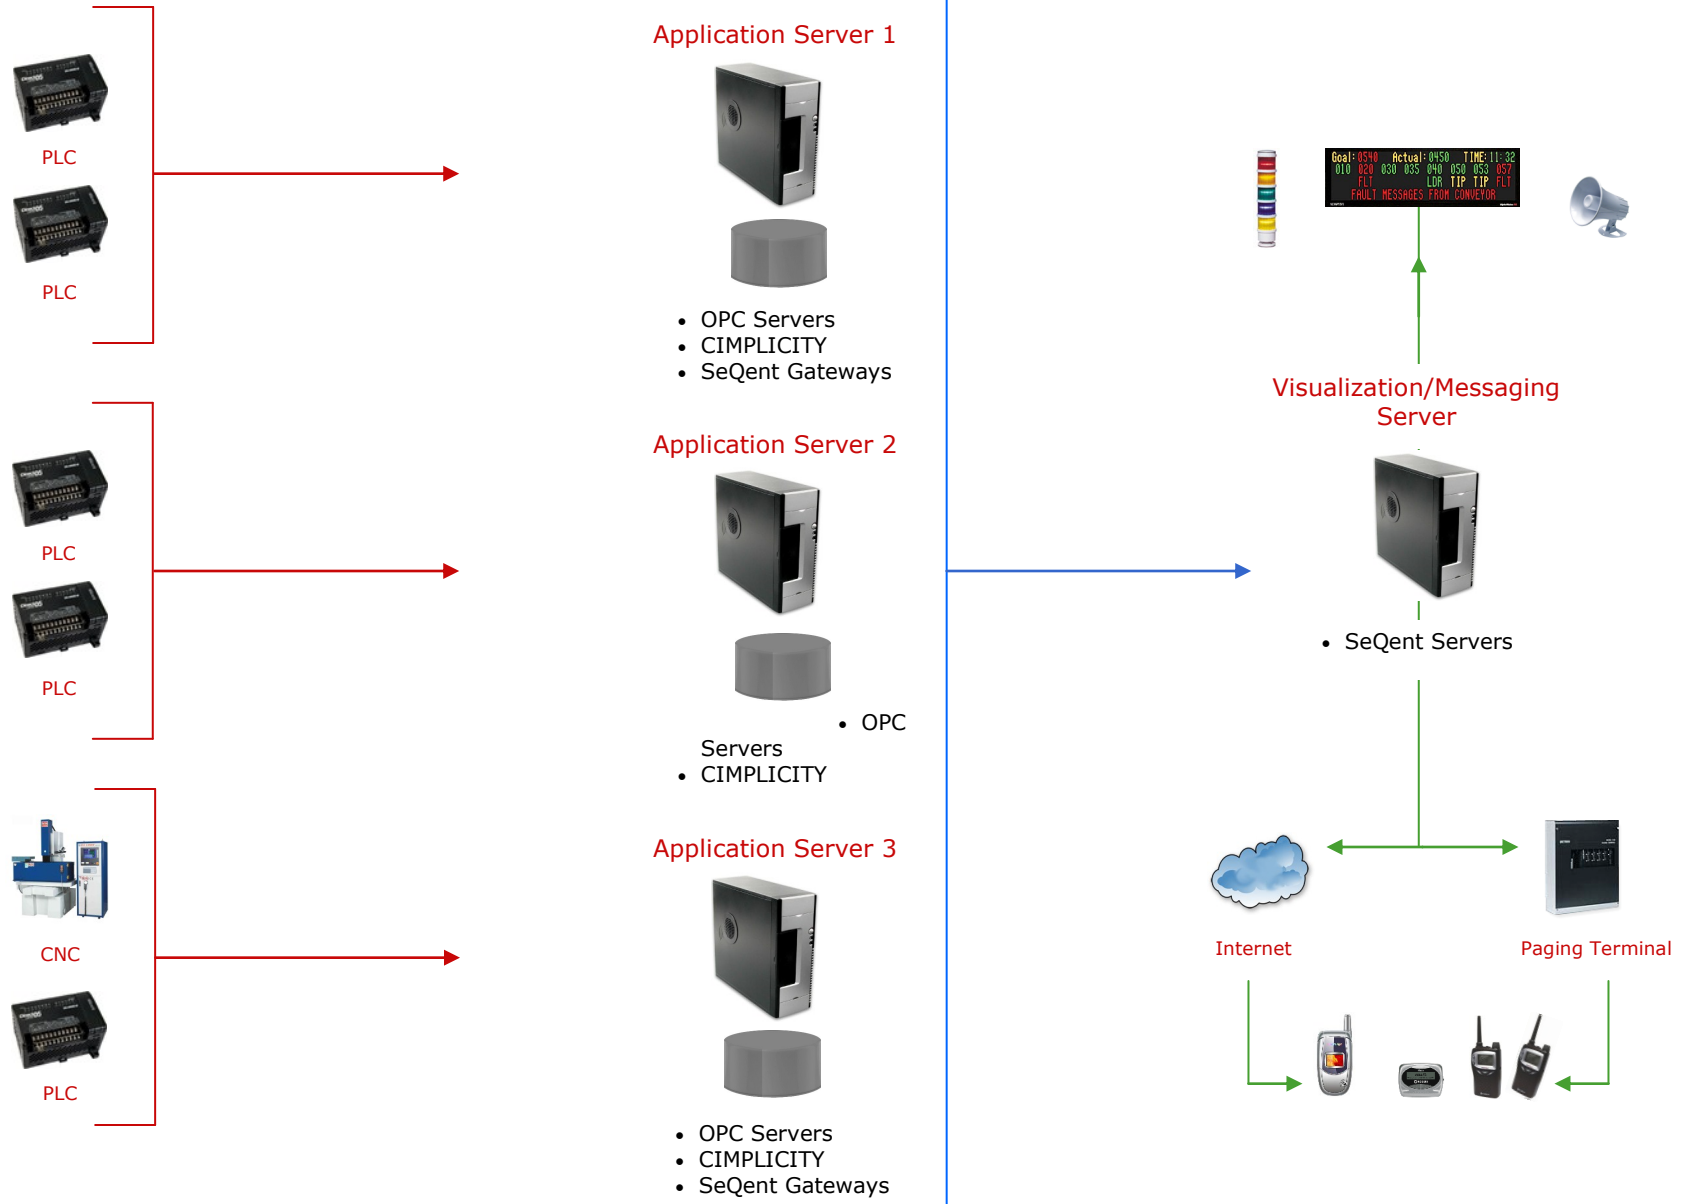

- ⇒ Sending messages to wireless messaging destinations such as Pagers, Mobile Phones, Blackberry's, PDAs etc.

- ⇒ Raising alarms in our alarming engine for dispatch and escalation

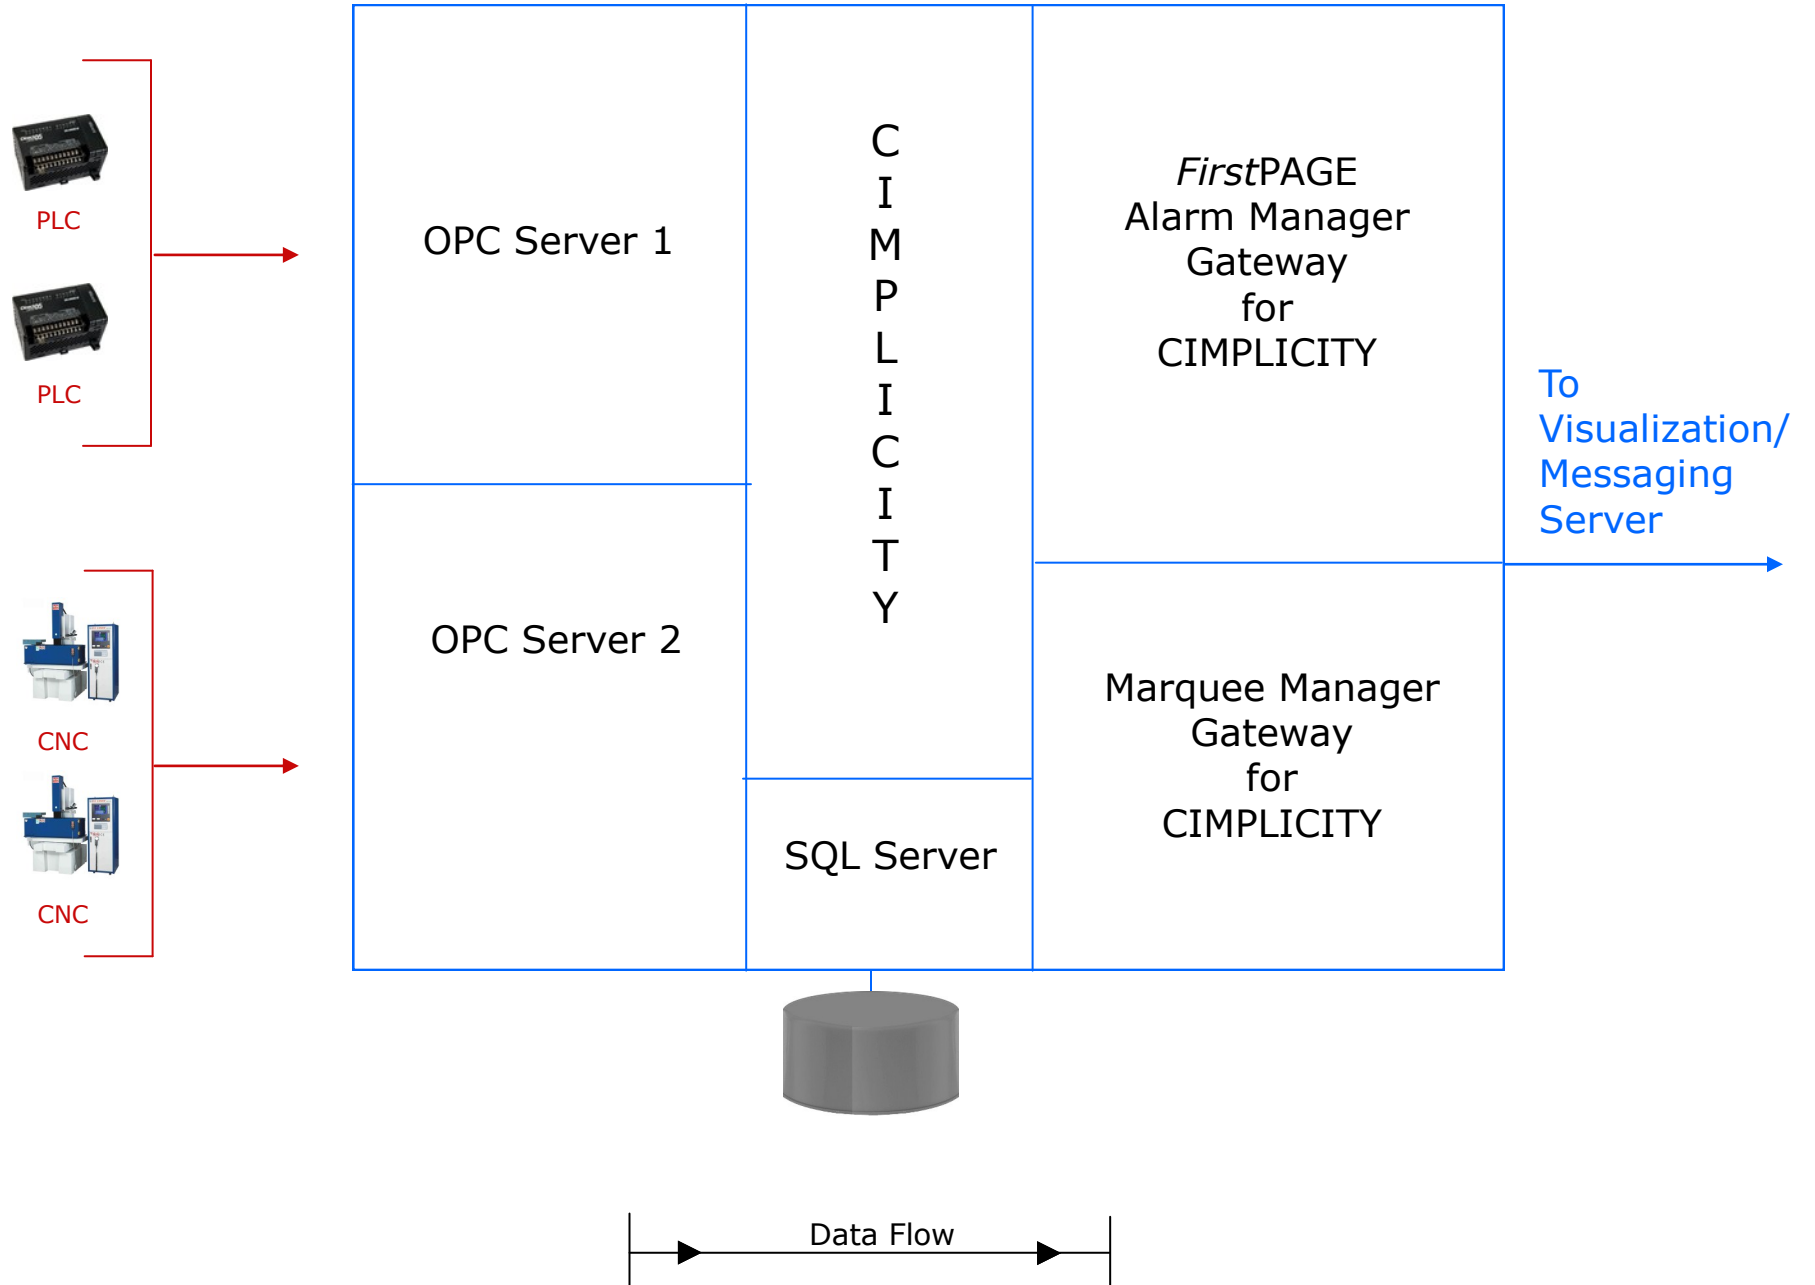

- ⇒ Sending messages to marquee, LCD/Plasma or Andon displays

SeQent's CIMPLICITY Gateways support all versions of [CIMPLICITY](#) V6.1 or higher.
